HOUSE DEMOCRATIC
CAMPAIGN COMMITTEE

Suppressions

Suppressions are designed to be used as an *removal* 'step add' in Votebuilder after setting the intended target such that voters who match some criteria, may be removed.
Suppressions additionally assume that campaigns are *not* performing face-to-face canvassing operations in the field. Instead, the suppressions target assume that 'geogrpahic' based field operations do not include identification collection, or other in-person conversations.

Geogrpahic

Due to the aforementioned assumptions, the Geographic Suppression includes only voters marked with contacts, refusals, hostilities or other that were marked in geographic specific operations— whether that be distributed, relational, or some other canvassing operation.

Non-Geogrpahic

By inverse, the Non-Geogrpahic Suppresion includes only voters marked with contacts, refulsals, hostilities, or other that were marked in non-geographic specific operations— whether that be texting, phone call, auto-dialer, relational or some other virtual field operation.
